General Homework Guidelines

Subrahmanyam Kalyanasundaram

January 22, 2010

I thought I shall write up a few guidelines and tips that you might find helpful while solving the homework problems.

- Please try to work out all the problems, even the ones that you do not need to turn in. If you have any difficulty and/or need hints, feel free to talk to me.
- Collaboration is allowed, but write up the answers alone, and in your own words. Please mention any collaborators in your submission.
- Try to be clear and concise in your solutions. It should be unambiguous. One guideline would be: if your friend in the class is reading the solutions, he/she should be able to understand.
- Please be clear about any assumptions that you make in the solutions. Once again, if you aren't sure what to use in your homework problems, please ask.
- Make use of my office hours.
- If you see anything weird in the problems, think there is a mistake, let me know so I can fix it.
